

NAME

tunix-intro - TUNIX Firewall User Commands

DESCRIPTION

The TUNIX Firewall Manual Pages in Chapter 1, User Commands, describes all commands of the TUNIX firewall that normally run from the command line. Unlike the regular UNIX manual pages in chapter 1, this chapter contains many so called maintenance commands that are only used by system administrators. This is because on the TUNIX firewall there are no regular login users, only administrators.

Chapter 8, System Commands, is reserved for manual pages of commands that are normally not started from the command line but from other programs, for commands started during initial system setup, and for daemons.
